

Social Circle Operating system

Main things we need for social circle:

1. Client CRM
2. Task management with ownership
3. Recurring tasks
4. Content production pipeline
5. Automated Telegram reminders (this sounds great)
6. Content calendar
7. Invoice/payment tracking (this should be only viewed by me)
8. Team performance tracking
9. File/asset management (if we can some how connect Goggle drive)
10. Mobile-friendly dashboard

Also every task needs status stages like:

To Do > In Progress > Waiting Approval > Completed.

For content we need:

Idea > Script > Shoot Scheduled > Filmed > Editing > Review > Approved > Posted.

I don't want it to feel complicated. Clean UI and fast workflow is more important than too many features.

My main goal is **Can the business run smoother and scale without constant manual chasing?**

I'm gonna break it down what would be important to have from my every day use.

1. DASHBOARD (Main Home)

This page should feel like everyday check in page

Today's Priority Tasks

1. overdue tasks
2. shoots today
3. edits due
4. approvals waiting
5. invoices unpaid (for me to view)
6. client meeting call pending

Team Performance graph (to motivate everyone)

1. completed tasks
2. delayed tasks
3. active projects
4. content pending approval

Quick Actions

Buttons:

1. Assign task
2. Add client
3. Create shoot day
4. Create invoice (only for me to do this)

2. Tasks

Every task needs:

Task title

Assigned person

Client

Deadline

Priority

Status

Notes

Attachments (if we can have our google drive link to see)

Statuses:

To Do, In Progress, Waiting Approval, Completed, Delayed, Cancelled

And MOST importantly: Every task should have who's responsible and if it's not done constantly remind until it's done please

RECURRING TASKS (VERY IMPORTANT)

Daily

Reply to comments

Share IG stories

Check TikTok trends

Client follow-ups

Check ad performance

Weekly

Upload schedules

Team meetings

Analytics reports

Invoice checks

Monthly

Content planning

Client reports

Renew contracts

Send Invoice

Strategy reviews

3. CONTENT PRODUCTION

I need this to be a proper content stages.

IDEA

Script

Shoot Scheduled

Filmed

Editing

Review

Client Approval status

Scheduled

Posted

4. AUTOMATED REMINDERS

Telegram is actually a sick idea if you can somehow make all in one space for me to work would be nice.

24 hours before deadline

overdue alerts

Also:

Notify you when tasks delayed, notify team when new task assigned, notify Social media manager when approval pending

Stuff like this just any task is not done they need that reminder

5. PERFORMANCE SYSTEM (it's nice to have this for boys to see)

completion rate

average delay time

client satisfaction

revisions needed

uploads completed

We need to keep this fun we don't want to punish anyone yet lol

6. **Client** (more like a CRM system for now we don't give access to them only for us to see)

brand name

contact details

package

monthly deliverables

shoot days (like a log system, every time we go there we can have a record)

invoices (only for me to see)

payment status (only for me to see)

content calendar (ideas when social media manager creates so who ever filming can see as well)

drive links

passwords/social logins

notes

performance reports (we use Metricool to send them reports, don't know if we need this on here)

Status tags:

Active

Pending Payment

Onboarding

Paused

Each client should have these stuff where social media manager and content creator can see

brand assets (drive link)

raw footage (drive link)

Contracts

7. FINANCE & INVOICES

This one is fully for me to use

This should include:

invoices sent

payment due dates

outstanding balances

monthly revenue

recurring retainers

who paid late

automatic reminders

For me to save time so I don't forget things so all in a dashboard to see whats needs action

Social circle Role system

Manager / Client Communication (Anj)

Social media manager (Harshal)

Content Creator (Suryansh) (Shan)

Admin (Shan)

Finance (shan)

Out reach and other (Raj)

This can be name based system
